

ECHO CHAMBER

Sci-Fi Anthology Series | 10 x 1 Hour

Logline

In a world where curated identity is currency and memory is programmable, each standalone episode of Echo Chamber explores the disturbing consequences of life in a society optimized by algorithms, where technology doesn't just serve us, it becomes us.

Series Overview

Echo Chamber is a grounded, high-concept anthology in the tradition of Black Mirror, Severance, and Ex Machina. Each episode is set in a loosely connected near-future, spotlighting a new protagonist caught between human instinct and technological design. The series unpacks themes of identity, surveillance, optimization, digital immortality, and the illusion of free will.

What sets it apart is its emotionally intimate approach to speculative storytelling. These aren't just tech parables, they're character-driven morality tales rooted in fears we're already living: deepfakes, social scoring, AI-enhanced versions of ourselves, and the selling of our most personal data.

Tone & Style

Moody, sleek, and psychologically tense. A visual blend of minimalist futurism and glitchcore surrealism. Each episode has a distinct look and palette but shares a tonal spine: quiet dread, corporate control, and moral ambiguity.

Comparable Titles

- Black Mirror (tech meets morality)
 - Severance (emotional depth within systems)
 - Love, Death & Robots (anthology scale)
 - Her, Ex Machina (emotional futurism)
-

Pilot Episode: "Filter"

A rising influencer wakes up looking exactly like her filtered self, forever. At first, it seemed like a dream. Until her optimized double starts replacing her, online and off. In a fight to

reclaim her face, her voice, and her very existence, Aria must confront the system she helped build.

Why It Works

Timely themes (AI, identity, digital obsession)

Anthology format = flexible casting and production

Bingeable, sleek, and emotionally resonant

Built-in worldbuilding for long-term franchise potential

deal for streamers seeking prestige sci-fi with cultural impact
