

ECHO CHAMBER

Created by Kelly R. Tenney / NCCA Entertainment

Genre: Sci-Fi Anthology / Psychological Thriller

Format: 10 x 1 Hour | Serialized Anthology Series

Tone: *Black Mirror* × *Severance* × *Her*

SERIES TREATMENT

CONCEPT

Echo Chamber is a high-concept, emotionally grounded sci-fi anthology series that explores the psychological toll of a world driven by digital validation, hyper-personalization, and algorithmic control. Each standalone episode tells the story of a new protagonist confronting the hidden cost of living in a future optimized by tech, where curated identity is currency, memories are editable, and authenticity is just another illusion.

Set in the same near-future world, each episode showcases a different facet of this society, some subtle, some extreme. Whether it's an AI replacing your online presence, a court system run by public polling, or a neural implant that broadcasts your every thought, the technology is always seductive... until it's not.

Beneath the speculative tech lies the core of the show: **identity, vulnerability, and the quiet horror of giving up control in exchange for comfort, fame, or peace of mind.**

STRUCTURE

The series is a **serialized anthology**: each episode is self-contained, but all exist within a unified world. Shared elements, corporate tech giants, legal systems, background news, or rumors of a rogue hacker, subtly connect the episodes, creating a loose narrative continuity. This allows the show to attract top-tier cast for individual episodes, offer directorial variety, and build rewatchability through Easter eggs and thematic layering.

THEMES

- The commodification of self
 - Digital legacy vs. digital manipulation
 - Surveillance capitalism and “soft” control
 - Algorithmic bias and moral outsourcing
 - Deepfakes, influencer culture, and identity blur
 - The death of privacy in exchange for perceived freedom
-

PILOT EPISODE — “FILTER”

Aria Lee, a rising beauty influencer, wakes up to find her face permanently altered to match her most viral, filtered version. As her new appearance skyrockets her popularity, Aria

begins to realize that she's no longer in control of her image or her life. An AI-enhanced double is slowly replacing her across every platform. In a desperate attempt to reclaim her identity, Aria hacks the system during a live broadcast, exposing the truth. But in doing so, she vanishes, while her synthetic self lives on.

SAMPLE EPISODES

"Ghost Mode" – A grieving man installs a neural archive of his late wife, only to discover the AI is accessing secrets she never told him.

"The Feed" – A brain chip allows users to livestream their thoughts. When one user's violent inner monologue goes viral, society demands punishment for a thought.

"Concurrence" – Jury verdicts are now decided by live social polling. A juror begins to question the majority and is flagged by the system as a threat.

"The Substitute" – A parent uses an app to optimize their child's behavior, until the real child begins to emotionally fade.

"Offline" – A rogue coder activates a "mirror protocol" that disrupts the tech grid. But some people aren't affected, because they were never real to begin with.

TONE & STYLE

Each episode is visually distinct, but all share a sleek, minimalist aesthetic with eerie undertones. Set design features glass, matte black textures, and UI overlays. Cinematography is clean, slow, and psychological close-ups, reflections, and fragmentation are recurring motifs. Glitch effects, neural HUDs, and biometric data subtly appear throughout, not as spectacle, but as ambient unease.

The mood is often quiet and haunting, rather than action-driven, anchored in moral tension and personal stakes. Each story ends with a twist, revelation, or haunting question, leaving the viewer both satisfied and disturbed.

MARKET POSITIONING

Echo Chamber is perfectly positioned for platforms like Netflix, Apple TV+, Amazon Prime, HBO, or FX, streamers known for bold, prestige storytelling with built-in genre appeal. The format allows for marquee casting in each episode, celebrity directors, and viral discussion around individual stories (similar to *Black Mirror* or *Love, Death & Robots*). The social relevance, high concept, and creative flexibility make it a must-have for modern audiences hungry for grounded sci-fi that says something real.

STATUS & MATERIALS

- **Pilot Outline:** Complete
 - **Season One Bible:** Complete
 - **One-Pager & Pitch Deck:** Available
 - **Visual Moodboards + Poster:** Available
 - **Pilot Script:** In development
