GRAY CELL

EVERY LIFE COUNTS.
UNTIL IT DOESN’T.

8 × 60-minute episodes
Singapore tech-noir thriller

NCCA Entertainment
Kelly R. Tenney

The premise

In Singapore’s automated future, a covert team hunts threats dismissed by the city’s predictive system. Each intervention forces its leader to choose whose life the system can afford to lose.

A human decision inside a machine-run city.

The hook

A dead man’s badge.
A valid work order.
A threat the system calls safe.

Four people notice what the algorithm ignores.
Stopping the attack makes them responsible for its consequences.

Singapore, 2030

Above ground

A city of precise grids, driverless trains and frictionless routines. LATTICE keeps public life moving.

Below the surface

Maintenance tunnels, service corridors and old equipment preserve gaps in the digital map.

Hawker centres and HDB homes give every system failure a human address.

LATTICE

The city’s predictive system ranks anomalies and models the cost of intervention.

A badge outweighs a face.
A risk falls below review.
A death falls within tolerance.

The rules embed human choices. The consequences reach people who never made them.

Sarah Chen Hui Min

41. Team leader. Railway daughter.

Sarah reads habits, rooms and silences. She follows a maintenance ritual to an attacker the system has already authorized.

She lies to a widow for access. She turns the key that redirects an attack. Then she meets the name behind the casualty count.

Her season question: how much authority can she claim before she becomes what she opposes?

The team

CLAIRE DE SOUZA

34. Aircon operator.

Her real business gives the team access. She trusts the result until an ordinary service call brings the death home.

DEVAN PILLAI

29. System insider.

He built the identity rule the attacker exploits. His faith in the model collides with his own authorship.

UNCLE ROS

63. Rail veteran.

He knows the routes the network forgot. When he hands Sarah the keys, he shares responsibility for the turn.

One team. Four different accounts of the same decision.

The opposing forces

DARREN SIM

A former signalling technician whose sister died in a LATTICE-assisted response. He builds an attack around the system’s own playbook.

He records names.

BENEDICT HO

An official with access to anomalies others never see. He chooses observation over escalation and keeps a private record of Sarah’s interventions.

He records counts.

Dr. Evelyn Koh provides a mandate she refuses to acknowledge when Sarah asks for permission.

The series engine

An anomaly slips below review.

Sarah’s team investigates through ordinary work, human relationships and forgotten infrastructure.

A deadline turns the investigation into a decision. The intervention leaves a consequence someone must own.

Each case advances the larger mystery: who shapes the forecasts, and who benefits from the accepted losses?

Pilot: Headway

A dead technician’s badge admits an attacker into a rail tunnel. Sarah’s team finds a device designed around LATTICE’s emergency playbook.

The model projects 37 deaths if they do nothing. Sarah redirects the fault to a lightly occupied train.

An elderly cleaner dies during evacuation. Sarah discovers that the woman had cleaned her table every morning.

The cost of intervention

“She cleared my table.”

Madam Low turns an acceptable loss into a life Sarah recognizes too late.

The team can agree on what happened.
They cannot agree on what it means.

Season One

Who gets to decide what “acceptable damage” means?

Sarah follows the connection between Bedok, Darren’s attacks and Benedict’s private record. New cases expose the human decisions inside LATTICE.

As the team’s interventions become visible, its members must decide whether to repair the system, expose it or resist the authority behind it.

Episodes 1–4

01 HEADWAY

A rail attack forces Sarah to redirect danger. One death fractures the team’s confidence.

02 PRIORITY

Hospital delays reveal whose care the model repeatedly postpones. Devan confronts a rule he once defended.

03 DEAD LOAD

A port anomaly threatens workers behind a clean safety record. Claire’s service cover becomes an exposure risk.

04 WITHIN TOLERANCE

The Bedok record ties Sarah to Pei Shan’s death. Darren forces the team to revisit the original decision.

Episodes 5–8

05 WORK ORDER

A case in an HDB block turns Ros’s trusted access into a liability. The team loses a route it depends on.

06 OBSERVE

Evidence of Benedict’s monitoring forces Sarah to question who has been steering their interventions.

07 NAMES

Darren’s ledger connects accepted losses. The team divides over how to expose it without triggering further harm.

08 THE NECESSARY SIN

Sarah confronts the authority behind the forecasts. She must choose what to reveal and take public responsibility for the cost.

Tone and audience

Grounded suspense. Intimate consequences.

Person of Interest
Surveillance and intervention

The Capture
Institutional control of evidence

Slow Horses
A fallible covert ensemble

For viewers of intelligent thrillers who want a weekly crisis, an unfolding conspiracy and characters worth following home.

Production and partnership

A Singapore-led world with an international thriller engine.

Recurring base: Seng Heng Aircon.
Civic locations: hawker centres, HDB homes and service corridors.
Rail sequences: controlled sets and planned visual effects.

Seeking development and production partners.
Budget, rail access and financing structure to be developed with the producing team.

GRAY CELL

Every life counts.
Until it doesn’t.
