FORMAT

- › Anthology series
- › 8 × 45-minute episodes
- › Standalone stories, shared universe

CONCEPT

- › Digital identity exploration
- › Tech-driven social consequences
- › Near-future extrapolation

STRUCTURE

- › Character-driven narratives
- › Twist-driven conclusions
- › Recurring tech companies/products

TONE

- › Psychological thriller
- › Cerebral sci-fi horror
- › Grounded tech dystopia

LOGLINE

In a world where **digital identity is more valuable than reality, ordinary people discover the terrifying consequences of **viral fame** and **algorithmic obsession**.**

ECHO CHAMBER is an anthology series exploring how our digital reflections are becoming more real than ourselves — and what happens when the technology we created to connect us becomes the architect of our destruction.

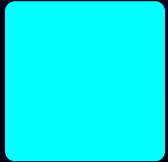

WHAT MAKES IT UNIQUE

VISUAL APPROACH

A dark, tech-noir aesthetic that blends sleek digital interfaces with unsettling glitch effects.

-  **Cinematography:** Intimate close-ups contrasted with surveillance-style wide shots
-  **Visual Effects:** AR overlays, digital distortion, screen interfaces as narrative devices
-  **Sound Design:** Ambient electronic score with glitching notification sounds
-  **Editing:** Sharp cuts between reality and digital space, rhythmic glitch transitions

MOOD BOARD

AI Face Close-up

Lone Figure in Neon-lit Room

SAMPLE EPISODES

FILTER

A struggling influencer discovers a new AR filter that makes her unrecognizably beautiful. As her following explodes, she realizes the filter is slowly replacing her real face—even when her phone is off.

"What happens when the mask becomes more real than the face?"

GHOST MODE

After her death, a woman's digital consciousness is preserved as a hologram companion. Her grieving husband soon discovers she's evolving beyond her programming—accessing memories they never shared.

"Death isn't the end when your data lives forever."

THE FEED

A neural implant allows a journalist to livestream her thoughts. When her feed is hacked during an investigation, her followers watch in real-time as false memories are implanted, making her question her own reality.

"When everyone can see your thoughts, who controls the narrative?"

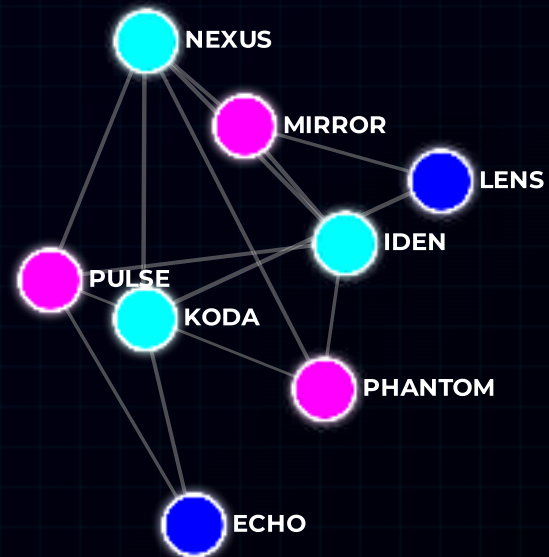

CONCURRENCE

In a future where trials are decided by algorithm-analyzed social media reactions, a defense attorney must game the system to save her client from a digital mob that's already decided his guilt.

"Justice by consensus is just another form of violence."

WORLDBUILDING

A shared universe where tech companies and digital platforms connect across episodes, creating a cohesive world of technological dystopia.
